LANGUAGES

Spanish: Native

English: Advanced (B2)

Japanese: Basic (A1)

RELEVANT PROJECTS

CursoFlow - [CursoFlow App](#)

Web application for managing courses and curricula, designed to facilitate the academic monitoring of students.

- Developed the entire interface using Next.js, Radix UI, and Tailwind CSS, prioritizing usability, accessibility, and responsive design.
- Implemented client-side data storage via LocalStorage to persist user progress without external dependencies
- Integrated a Pomodoro timer system to help users stay focused during study sessions by structuring time into productive blocks.
- Designed a progression and achievements system to encourage consistency and celebrate milestones throughout the learning journey.
- Integrated Google Calendar, automatically generating events with personalized links that calculate the course start date and estimate the end date based on selected duration.

ShareIT - [ShareIT Web](#)

Website developed with Astro for the Argentine community called ShareIT, whose goal is to convey the ideology and values represented by ShareIT. In addition to sharing articles written by the community itself and shared resources

- Led the technical and strategic development of the project from its inception.
- Coordinated the implementation with Astro, optimizing performance and scalability.
- Polished the user interface, unifying sections and improving the design of already implemented parts.
- Next steps: plan refactoring with a scalable architecture (Screaming Architecture). Upcoming implementation of events section, administrative panel for leaders, and CMS with Sanity for content management.
